

Citizens Advice consumer service - data collection guide for partners

Overview

Consumer service advisers record all case details on our case management system, Flare21. This document is designed to outline the fields advisers complete when responding to a client by telephone or email.

Flare21 is a system made up of a number of interrelated databases, allowing consumer service advisors to record client and trader information and case details.

An advisor will collect data/information from a client calling the service and input this information to complete data fields and codes. Codes are used to organise data entry for reporting.

Some of the above data fields will be mandatory; this will mean that an advisor will not be able to save any part of the case without inputting some data in the required field/fields.

All of the data is sent in either a referral or notification as well as being added to the Central Data Warehouse (CDW) which is accessed via the Partner Portal.

While not all cases will contain all fields of data, this guide should provide you with some insight into the types of data you should frequently encounter when analysing consumer service cases. If there are a number of cases without a particular field as outlined here, please contact the consumer service operations team by email (<u>operations@citizensadvice.org.uk</u>) and we will endeavour to assist.

Additional notes

If certain information is not available the advisor should add an explanation to the case notes (such as "no trader information")

Advisors will only use 'AnonAG or AnonCAS ' where a client requests to remain anonymous. i.e they do not wish to provide any personal details.

Some clients do not wish to be anonymous but just decline to give details of their name, address and/or other contact information that would normally be captured. In these circumstances advisors will record the information provided in the appropriate data field and leave all other fields blank. For example, the client agrees to give their telephone number but not their name and address - the data fields for client name and

address information would be left blank and the advisor will note in the case notes the client did not want to leave these details.
